

Company Information

Precision Turbines, Inc. prides itself on dealing with our customers and suppliers in a honest and professional fashion with complete integrity. Our employees stand ready to meet your needs with the attitude and industry experience that make us a pleasure to work with. The company principal Robert Spahr, has had a fascinating, long-term career in aviation and has broad aerospace engineering, marketing and sales experience.

At Precision Turbines we purchase turbofan and turboprop engines and components. Precision Turbines buys and sells all models of TFE731, JT15D, and PW100 engines. Engines are sold on exchange or outright, or offered on short or long term leases. Alternatively, we can arrange to sell your engines, aircraft, and parts on consignment. Our engine management service offers you tremendous cost savings on engine overhauls, repairs, or hot section inspections.

Because of our excellent relationships with all major engine shops, we can work directly with them to cut costs. We save you money by supplying top-quality serviceable parts instead of factory new. Precision Turbines maintains an inventory of engines overhauled by Pratt & Whitney and Honeywell approved facilities to the latest Service Bulletin standards. Jet engines are available for sale or on an outright exchange basis. Our exchange program provides the customer with a fixed price and eliminates the unknown cost variances and downtime often associated with engine overhauls.

For more information, please contact us or review our available engines online now.
